I subscribe to XM Satellite Radio because it provides the best selection of music that I can find on any medium - broadcast radio, cable, anything. I find the weather and traffic reports on XM radio to be more extensive and more accurate than reports on commercial broadcast stations. Living in New York and working in New Jersey, I rely on these reports twice a day to be informed about alternative routes. XM radio's reports are often up to five minutes in length, covering many more roads than other stations can cover in two minutes or less.

Please allow satellite radio to continue to broadcast traffic reports. I pay for that service, and I want it.
